

Lesson 05 Demo 01

Implementing Job Import Plugin

Objective: To install the job import plugin for importing jobs from an existing Jenkins instance, streamlining job management, and enhancing productivity

Tools required: Jenkins

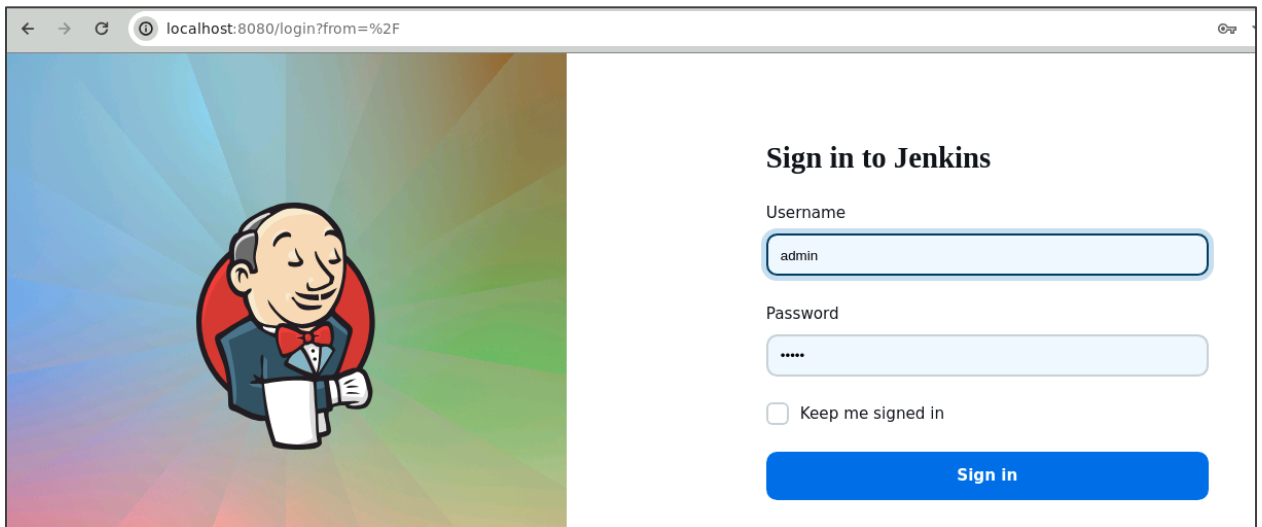

Prerequisites: Jenkins must be operational.

Steps to be followed:

1. Install the job import plugin in Jenkins
2. Configure the job import plugin
3. Access the job import plugin

Step 1: Install the job import plugin in Jenkins

1.1 Sign in to the Jenkins platform

A screenshot of a web browser window showing the Jenkins login page. The browser's address bar displays 'localhost:8080/login?from=%2F'. The page features a large, colorful background image on the left depicting a cartoon character in a tuxedo. On the right side, there is a 'Sign in to Jenkins' section with a 'Username' field containing 'admin', a 'Password' field with masked characters, a 'Keep me signed in' checkbox, and a blue 'Sign in' button.

Sign in to Jenkins

Username
admin

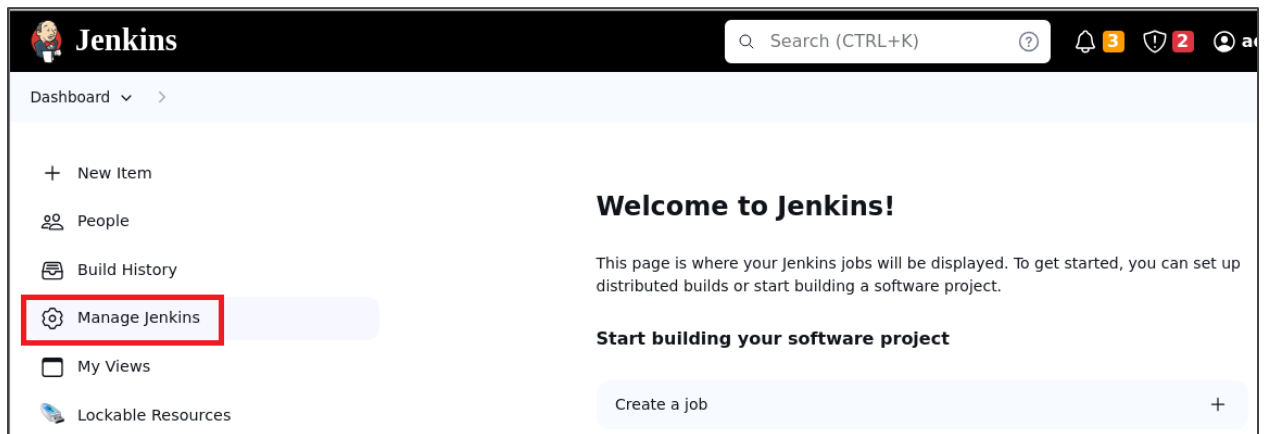

Password
.....

☐ Keep me signed in

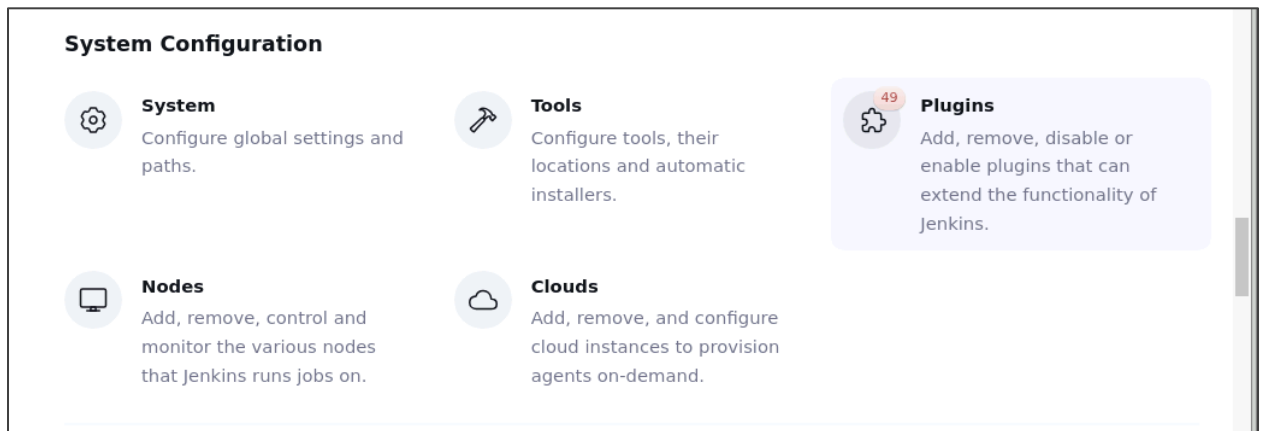

Sign in

Note: The credentials for accessing Jenkins in the lab are Username: **admin** and Password: **Root123\$**.

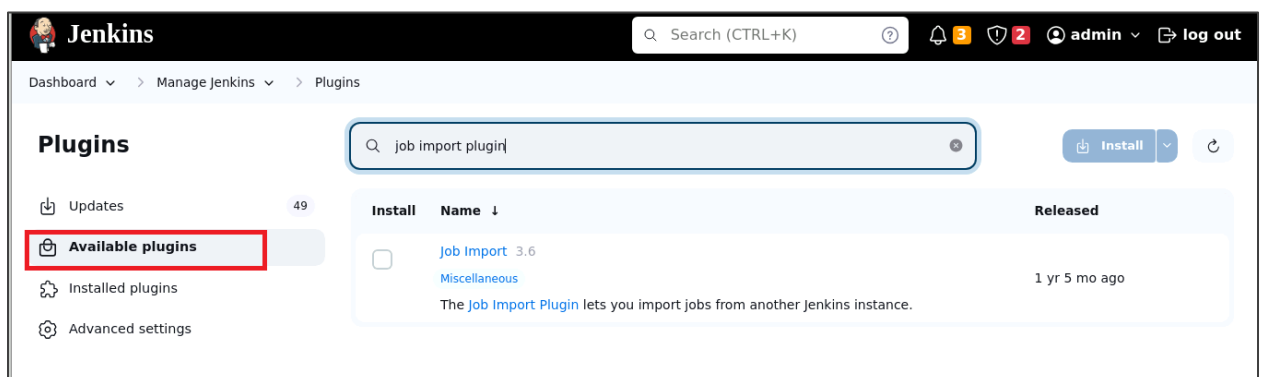

1.2 Select Manage Jenkins

1.3 Now, click on Plugins under System Configuration

1.4 In the Available plugins tab, search for the Job import plugin

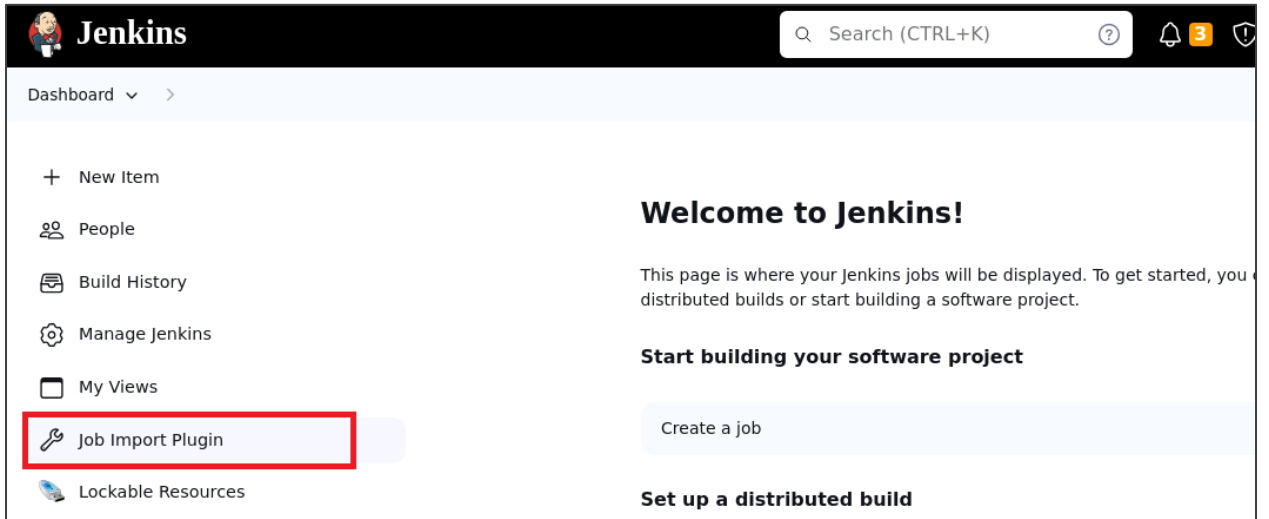

1.5 Select it and click on **Install**

Once the plugin is installed, restart Jenkins to activate the plugin in Jenkins.

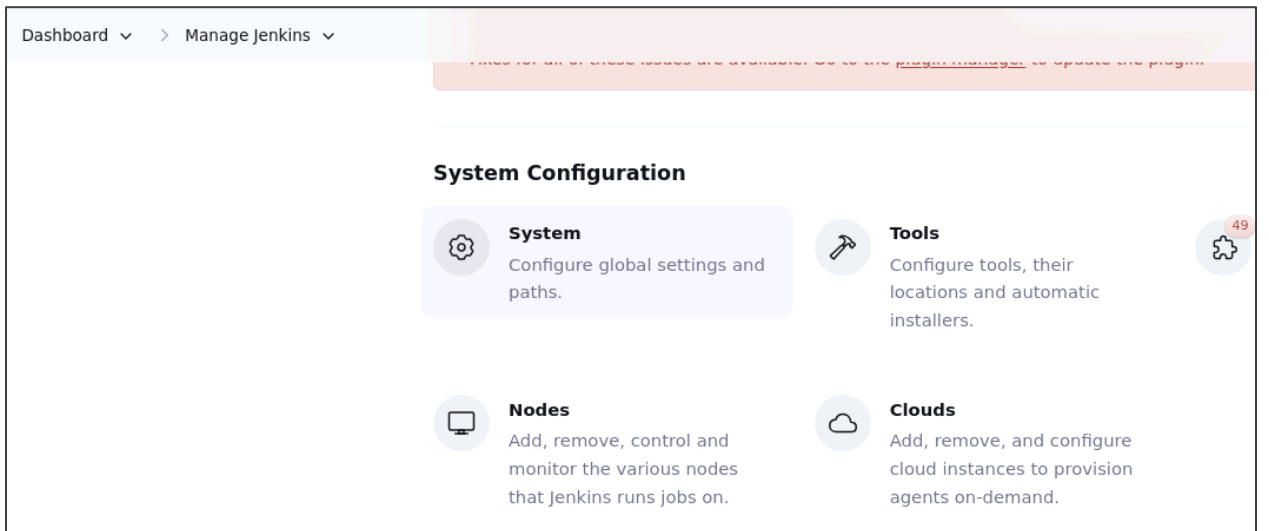

Step 2: Configure the job import plugin

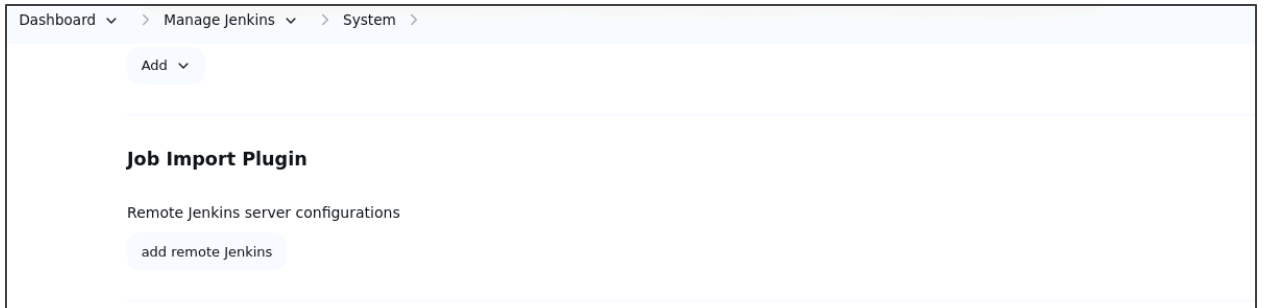

2.1 Navigate to the Jenkins dashboard and select the **Job Import Plugin** option to access the plugin

Before using this feature, configure the source Jenkins server from which you can import the Jenkins job.

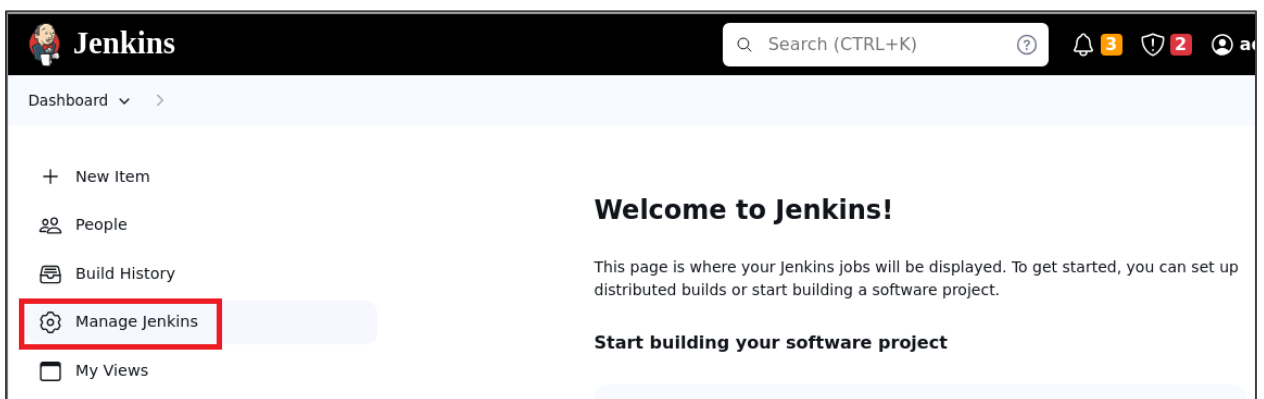

2.2 Now, navigate to **Manage Jenkins** and click on **System** under **System Configuration**

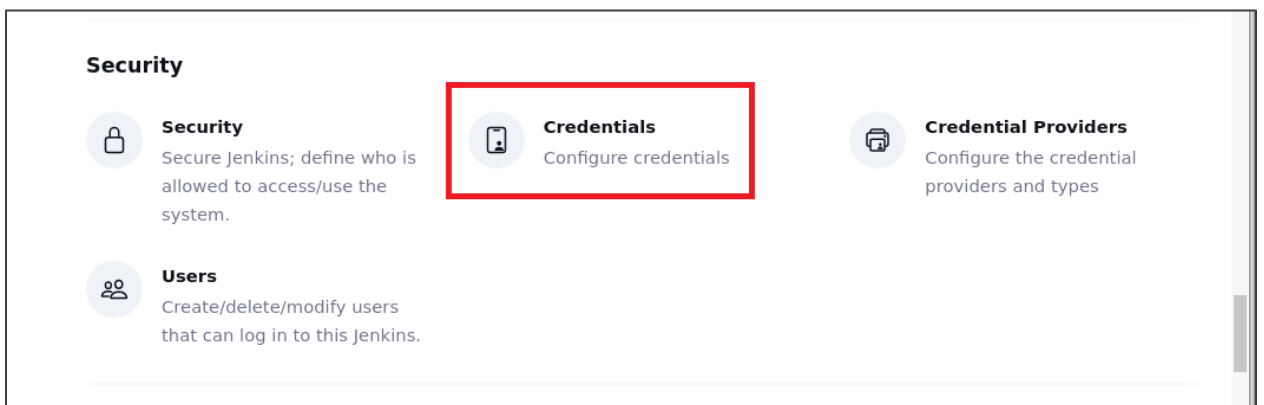

You can see a **Job Import Plugin** section for configuration.

2.3 Now, navigate back to **Manage Jenkins** in the Jenkins dashboard

2.4 Select **Credentials** under the **Security** section

2.5 Select the Jenkins job scope as **global** to create global credentials for the Jenkins job

2.6 Click on **Add credentials** to add new Jenkins credentials

2.7 Provide the details like username and password and click on **Create**

Dashboard > Manage Jenkins > Credentials > System > Global credentials (unrestricted)

Username ?
admin

☐ Treat username as secret ?

Password ?

ID ?
jenkinsCreds

Description ?
jenkinsCreds

Create

2.8 Now navigate back to the **Manage Jenkins** page and click on **System** under **System Configuration**

Dashboard > Manage Jenkins

System Configuration

- System**
Configure global settings and paths.
- Tools**
Configure tools, their locations and automatic installers. 49
- Nodes**
Add, remove, control and monitor the various nodes that Jenkins runs jobs on.
- Clouds**
Add, remove, and configure cloud instances to provision agents on-demand.

2.9 Scroll down to the **Job Import Plugin** section, provide the **Jenkins server name**, **URL**, and **credentials** to connect with the existing Jenkins job, and click on **Save**

Dashboard > Manage Jenkins > System
